Attached is a draft letter from Bill Boyle to St. Clair County authorities in support of their efforts to be chosen as the site for the new McDonnell-Douglas aircraft facility.

The facility requires offsetting air emissions reductions; Krummrich has reductions that could contribute to the offset, if the state EPA agrees. Other industries in the area are also being asked to participate.

This is a positive for Monsanto -- because we have aggressively and voluntarily reduced emissions at WGK, we can help a new facility (with 7,000 jobs or more) to locate in the area. There is some potential downside in making it possible for total emissions to rise again (from the new plant). But the plant will also bring jobs to an area that needs them and Monsanto's emissions still will be reduced even if a new source is created.

Action Requested: Your concurrence in the commitment described in the letter.

Belleville IL 62201

Dear John:

Subject: McDonnell-Douglas MD-12X Facility VOC Emission Requirements

Monsanto Company intends to work with the Illinois Environmental Protection Agency, the State of Illinois, St. Clair County, Illinois, and other Illinois industries to facilitate the location of the McDonnell-Douglas MD-12X production facility. It is understood that the MD-12X facility will require an EPA operating permit based upon projected annual VOC emission offsets of 150 tons.

Sincerely,

Bill

William J. Boyle, Jr.
