Your point on the Editor's comments in the ELECTRICAL REVIEW October 8, 1982, are well-taken in that he "discounts" the material because it was supplied by Monsanto.

For future reference, attached is a copy of a memo dated September 30, 1982, by Dr. John Todhunter, Assistant Administrator for the U.S. EPA, using the reference that PCB's are less acutely toxic than table salt. If this fact can be used in our Public Relations, in the proper context it could help us. It seems that editors twist Monsanto statements to their own end.
