SUBJ: Mono-Kote Data for Health Safety Program

Dave Powell has been given the responsibility for coordinating the assemblage of the necessary data that will enable us to present a factual story on the dangers or lack of danger in using the present Mono-Kote formula. I asked him what additional sampling he would need so that we could do what we could to obtain this for him.

Attached is a copy of a letter listing the additional data and samples that they would like to try to obtain. You are going to have to work with Tom Egan in terms of locating places where the tests requested can be run. I presume you will be assigning Berman to do this work, and I would like you to get him started on the project.
