CARL G. STRELIN, SECRETARY

March 25, 1947

Mr. Virgil C. Kline,
Johns-Manville Corporation,
22 East Fortieth Street,
New York 16, N. Y.

Dear Mr. Kline:

Replying to your letter of March 18th, the figures you've quoted are good round figures in line with what we would expect if we were undertaking the project. Of course, there are many factors which could cause changes. For example, the cost of a 175,000 sq. ft. building with air conditioning, heating, sprinklers, etc., could roughly be estimated at $10.00 per sq. ft. under present day conditions. The extra $250,000 may be excessive, or could be directed to contingencies.

The price of $1.50 for continuous textile yarn represents a fair average price based on an assumed mix of goods. The present price of 150's yarn is somewhat lower and 450's yarn a little higher, and, of course, the trend has always been downward as efficiencies and costs permit.

We are working on a draft of agreement in line with our discussions and should have it in your hands shortly.

Sincerely,

Carl G. Strelin

CGS/emf
