MONITORING FOR HEALTH HAZARDS

Per your request, we have monitored during the past year as follows:

1) We follow all medical surveillance programs as required by area for biological monitoring. All of our people are used to frequent checks for the various programs. (TEL - Alpha - Mercury - MOCA - Cyanosis).

2) We extensively monitor for explosion hazards and O_2 adequacy.

3) Other monitoring:

a) Asbestos (Environmental and personnel)
b) Noise
c) Styrene (limited number of people - single job)
d) Monitor areas illumination
e) We frequently "grab" sample the following chemicals. (Where the letter "C" appears, it infers we (C.W.C.) impose the chemical onto the premises.

("C") 1) Acetone 2) MEK 3) MEKP 4) Toluene 5) CO
6) Gasoline 7) Alcohols 8) Xylene 9) Vinyl Chloride
10) Styrene 11) Ozone

(OTHER CHEM) 1) Benzene 2) Analine 3) H_2S 4) Phosgene
5) Chlorine 6) Ammonia

)410

Please keep in mind, most of our sampling is interpreted locally as a "GO" - "NO Go" reading. Our capability, in most cases, is not quantitative. If we get indications of any sort, we explore the source and reason; usually, we find interference in our limited capability and are able to presume we have no exposure.

It might be of interest to you that I often sample at the request of mechanics and/or foremen. My presence and interest is always well accepted. Qualms amongst the forces are quelled by frank discussion and explanation. I've never had any resistance to personnel monitoring. In fact, the cooperation reveals a sincere interest. The safety office is "open door" to the Union representatives and they are usually up to date on what we are doing.

Any other information or details you need, please contact me.

Note: We also supervise extensive monitoring for radiation due to weld examination.
