PCB loss control 10/17 (72)

Bill

PCB information for staff meeting

Losses from Dept 246 are up to about 2.5#/day. Compare with 0.2-0.3#/day when not air blowing.
Average WTP Influent @ 8#/day. Effluent 4#/day
Main reason is that C/S stocks are high. On 10/4 gas line from 236 was blanked so that 217 received only gas from 246. Since that period there has been some intermittent sewering at Dept 246.
Expect losses to remain at this higher level as long as C/S inventories are high and 246 is the sole gas supplier to 217. Possibly all winter. Need our scrubber project?

Hyp Horner going to Cincinnati 10/19 to compare our method of PCB analysis with government (low key).

WGK PCB strategy meeting with Papageorge-Lavage et al to be this Friday 10/20
