JM-2151

On 5/2/73 Dr Irving Selikoff of the Mt Sinai School of Medicine, in a speech to the Industrial Hygiene Area conference in Boston, claimed that new research in Great Britain proved that the British Occupational Hygiene Society recommended asbestos exposure standard of 2 fiber per cc. again which the U.S. Standard (2 fibers in 1976) was based, was no longer adequate as a safe exposure level.

The research referred to was done at Turner Asbestos, Rochdale England and their Chief Medical Officer, Dr Elton Lewinsohn vigorously challenged Dr Selikoff's position and his interpretation of the research results

J-M was supportive of Dr Lewinsohn, directly and through asbestos association, and J-M worked with Lewinsohn in formulating his response to Dr Selikoff

The attached material is from files 1, 14, & 17 of Prod box 13-459. It contains Dr Selikoff's speech, Dr Lewinsohn's letter to Selikoff, Selikoff's reply & J/M material in relation to the controversy
