Company History

Indeck Keystone Energy brings together a focused group of experienced engineers specializing in maintaining a high level of customer support for the steam generation industry. The company can trace its roots to 1840 to where it began production of high quality, specialized boiler designs.

1859 Erie City provided the steam generator and engine to drill the world's first oil well in Titusville, Pa. In 1985 a new boiler was duplicated for the Engine House at the Drake Well National Historical Museum.
