An experimental run on Aroclor 1242 has made material with exceptionally good stability. The runs involved holding Aroclor 1242 as crude for a minimum of 24 hours. The runs will be re-checked and when confirmed will be incorporated in our plans for equipment changes.

A failure occurred on #4 underground storage tank due to external corrosion. This is the second in one year. Replacement is indicated in the near future.

#2 Still pump and coil failed and were replaced.

Sales were below capacity.
