PLAINTIFF'S EXHIBIT DUP-797

Question #1 Obligation to air sample OSC's?

We have no obligation to sample them assuming, as you say, no DuPonters affected. What bothers me is the likelihood that DuPonters are usually subject to some degree of exposure, especially during the OSC's removal of old insulation and until the site is cleaned up.

Question #2 Frequency of our exposure sampling

Yes, very infrequent, but only once in 5 yrs? As a routine thing, DuPonters are most likely to be exp d, not doing "insulation" work, but in removing insulation to do other work. P&O frequently has dismantling jobs which involve breaking into & handling old insulated lines & equipment. All maint. groups frequently have to remove old insulation for access to joints. During these types of jobs, short term exposure potential is quite high and relatively frequent. [illegible]
