Specification Committee Meeting
VCM-300

On December 8, 1953, a meeting was held to discuss the Firestone specification on VCM. It was agreed that additional data would be obtained on the Dorell weathering test, and on a possible correlation of Firestone's relative viscosity with Monsanto's poly-rate.

Bill Wiese will be in town this Friday, April 2. A meeting of the Specification Committee will be held at 2:00 PM, April 2, in Mr. Schleicher's office, for an up-to-date discussion of the Firestone specification.
