Subject: Asbestos Exposure

Attached please find a record of our asbestos exposures since May 1, 1979. Corky asked for the list and suggested the mailing list.

In explaining the list, let me say that 95% of those exposures were recorded in conjunction with the Alathon shutdown — both during and in preparation for it.

All exposures related to working around the induction heating coils used for stress relieving. Only 5% of the exposure times should be attributed to actual handling of these coils. The remainder of the time involved welding near the heating coils. During the welding operation, the coils were not disturbed.

Our exposure list does not separate the handling of the coils and working close to them.

Should you have questions, please call.
