NOVATEX ASBESTOS

TECHNICAL SALES BULLETIN

We have had inquiries regarding the suitability of 9P134N Novatex for wrapping stainless steel pipe, particularly on nuclear job sites. There are some specific points to be considered when recommending any asbestos material for use in contact with stainless steel.

Most standard asbestos contains leachable chlorides which makes it unsuitable for use in contact with stainless steel. Standard 9P134N Novatex contains 1500 parts per million leachable chlorides.

If you are quoting any asbestos roll material to a customer who is working with stainless steel, be certain to make him aware of this situation. Mil. Spec. MIL-1-24244 specifies the allowable parts per million chloride in a nuclear application. Ask the user if he must conform to this military specification.

If required, the factory can supply asbestos material with a lower amount of leachable chlorides and with an inhibiting treatment to meet military specifications. This would be a special order item and would require a quote by O.K.I. on price and delivery.
