SUBJECT DIOXIN ANALYSIS

REFERENCE

TO John Craddock
A2SA

I discussed today with Clayton Callis, the subject of dioxin analysis in tissues. I recently was included in a discussion on the subject of dioxins involved in our Sturgeon spill. It would have been a great bonus to Monsanto if I had better information regarding the levels of the dioxin in the tissue, as well as intimate knowledge of the analysis.

Clayton Callis agrees that we should talk to EASC and develop a "limited" program for such analysis. Clayton thinks that you and I should develop a proposal and get back to him. This looks like an opportunity to get into the business of chemicals in tissues because I would suspect that we could pursue PCB's in tissues in an equally limited fashion.

George Roush, Jr., M. D.
