PCB-PUBLICATIONS

Attached is a copy of the paper we have prepared for the Meeting in Stockholm on 29th September convened by the Swedish National Environment Protection Board.

This paper has been submitted to the organizers in advance for circulation to all those attending and it may be used as an introduction to the General Discussion period. It is virtually a reprint of the paper read at the Cigre meeting in Paris last month. Slight modifications have been made to broaden its scope to include all applications and not just the electrical uses.

I am also attaching a copy of the paper that Prodelec are presenting at this same meeting.
