RE: CSE, Response

VISTA

January 6, 1987

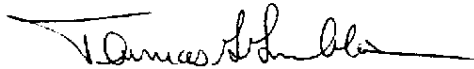

Ron Lewis
Dial Technical Center
15101 N. Scottsdale Road
Scottsdale, Arizona 85254

Dear Ron:

This letter is in response to your request for information on the lead and arsenic content of Vista's detergent alkylate. Vista does not routinely analyze for these metals. However, in December a special analysis was run on Nalkylene 500® product. The results indicated no detectable levels of lead (detection limit 0.1 mg/l) or arsenic (detection limit 0.01 mg/l).

Further, there is no identifiable source of these metals in the feedstocks or process used for production of our Nalkylene® products.

Sincerely,

Thomas G. Grumbles
Environmental Quality Manager
