W. F. B. Gedye
Toronto

I don't think there is much else to be done on the claim referred to in your memorandum of September 9, addressed to Dr. W. H. Hunt.

If you would want, I could write to the Toronto Workmen's Compensation Board and ask them what sort of claim was made. I could state we have never had any chest conditions due to Aroclor fumes but I don't think that would help much. We could tell the authorities that Aroclor has a characteristic odor if heated, which would warn against continued exposure. We could also say that if there were continued exposure, one would get systemic rather than chest trouble and, finally, that there would be nose and throat irritation if the fumes were particularly concentrated.

All this, however, would not amount to much and I think we should not do any more than just send them the information they ask for.

R. Emmet Kelly, M. D.
