ASBESTOS ANALYSIS

As I discussed with you, enclosed is the report from Webb-Paine Laboratories and the same three filter cassettes. This doly represent a very high fiber count but as P & CAM 239 directs all fibers if L/D aspect is met are counted as asbestos. I need to know if the asbestos fibers are free or impregnated-coated with the asphalt/vinyl tile or the mastic/glue used to hold the material to the cement floor. The loading is high and taken during a non-typical sanding operation. The samples 52-1 and 52-6 were sampled for 15 minutes at 2 l/min rate. If you could obtain this information by the end of June I would appreciate it. Charge 7601-7327-0200. Call me if you have any questions (727-9529)

Thanks
