Mr. Wiegand — Plant B Laboratory 1/18/40

CC Mr. O'Neal
Mr. Dinsmoor — Plant B

Will you kindly furnish us with present specifications on Aroclors 2565, 4065, and 4465 and advise what changes in laboratory test procedures have been made since we furnished methods to you in 1936.

The specifications which we have (none later than 1936) specify Barrett apparatus for softening point. Is this apparatus now used and if so will you send us about 1 quart of standard material together with the softening point value of the standard.

If the blooming or crystallization test is still in effect will you please send us a small quantity of seed crystals?

We would also like to have about 1 quart of Aroclor 4465 from a lot which meets specification in order that we may have a known color and soft point.
