George Levinskas completed a draft of the Monsanto summary of the monkey study sponsored by Monsanto at Litton Bionetics. The Litton study was commissioned to establish good data on actual animal feeding levels needed to refute data published previously by Dr. Jim Allen, University of Wisconsin. (Allen's feeding levels appear to be higher, by a factor of 80, than reported due to mathematical errors.)

The report was discussed with the Biohazards Committee Wednesday as a peer review mechanism.
