PCB Task Force Activities week of 10/25

I Verify premise that PCB content in sewers is related to solids present in sample and that amount of solids present is function of type of sampler used to get sample.

Have three types of samples taken at Work Treatment Effluent.

Analyze filtered and unfiltered samples.

II Verify that solids in sample are representative of solids in stream

24 hr series of grab samples for analysis

III Design sampler?

IV Implement control data at department level.
