RE: ASBESTOS RULE CHANGE

Enclosed please find a copy of the new asbestos rules. I'm sending this in response to a call from Mr. Roger Blevins who mentioned an upcoming asbestos abatement project at Lafayette. Demolition and renovation are defined as construction activities so this work will come under the Construction Standard in the new asbestos rules (29 CFR Part 1926).

OSHA's revised standards became effective on July 21 but you will be interested to know that some of the other requirements such as training, monitoring, medical surveillance, and engineering controls have different effective dates. As you have the opportunity to read these rules feel free to call with any questions you may have. In some cases there may be room for interpretation of the rules especially when asbestos related activities typically conducted by Alcoa may fall into either of the two new rules.
