PYDRAUL AC - Chas. Pfizer & Co., Inc.

Mr. Richard Davis
General Offices

I think all we can tell Pfizer is something like the following:

1) The decomposition products of Pydraul AC can include carbon monoxide, carbon dioxide, water, HCl, phenols and aldehydes, and undecomposed Pydraul AC vapors, depending on the conditions of decomposition such as temperature, oxygen available, period of contact with heat, etc.

2) We have no information about their "understanding that this material will not support bacterial growth."
