It appears highly desirable during our upcoming discussions with Region V of the EPA that we give them a position statement on the status of termination of PCB production at WGK. That statement should be the following:

> Consistent with Monsanto's public statement before Russell Train in January of this year, we want to get out of the production of PCBs as quickly as possible. The exact timetable for termination of PCBs must be established by our customers' ability to convert to alternate products. We would hope that conversion to alternates can take place rapidly enough to permit us to shutdown by the end of 1977. We will attempt to firm up our exact shutdown schedule as soon as feasible.
