MR. J. H. LOWRY
DAVENPORT WORKS

Re: MARANITE

Attached is a portion of a letter I wrote some time ago concerning the captioned. I would guess that this evaluation will apply equally as well to Davenport. Continuous, long time exposures to Maranite dusts are bad. Occasional brief exposures are only a nuisance. For brief exposures, the amount of dust will determine the degree of nuisance and ultimately determine if ventilation control or respiratory protection is needed.
