Tom C. Ford - St. Louis

May 26, 1969

Mr. R. J. Kotnour

Mr. Howard S. Bergen
Dr. William R. Richard
Mr. Elmer P. Wheeler

Attached to each of you is the latest round of clippings from Madison. The stories are interesting.

PCBs are claimed to be used in paints, tires, lipstick and cutting oils.

Our friend Risebrough also seems to have been used to prove widely varying points. Porter from Shell was read a statement from Risebrough's prior technical paper which called PCB "one of the most widely distributed contaminants" and that it produced more enzymes. Yet, on the next day, Risebrough testified personally that DDE, not PCB, was the villain in the creation of thin egg shells.

It goes to prove, I reckon, that you can use research results to prove most anything.
