At your request we have analyzed the results obtained from G. E. on TCC results. They represent material sent to G. E. since Jan. 1970.

Based on the 60 results obtained, a statistically significant (95%) difference was noted on results prior to October 1970 as compared to 11/70 - 5/71 results. The data was analyzed using a population t - test.

Jim Gloeckner

emc

Ed,

Let's check again (when there is sufficient data) to see if GE results show the same shift to a lower TCC beginning in May.
