Monsanto Company
277 Park Avenue
New York, New York 10017

Attention: Mr. Randall Grahame

Dear Randy:

This is in response to your December 15 form letter and covering note asking for an estimate of our solid PCB contaminated waste. The preponderance of such solid waste material generated at the Bridgeport and Totowa plants is in the form of capacitors rejected at final inspection and test; at our anticipated 1971 level of operations, the estimated total is approximately 36,000 pounds per year, of which I estimate the 1242 Aroclor content to be about 11,000 pounds per year.

Best regards,

ELECTRONIC COMPONENTS DIVISION
Universal Manufacturing Corp.
