Ms. Pat Penney

Dear Pat:

My information was that it was "an editorial in a Los Angeles newspaper" about the alleged PCB contamination of wildlife. But you know how these things can get mixed up. Just let it go; the clippings will be coming in through regular channels in the next few weeks.

Just chatted with McKee about your trips to the West Coast plants. Think it is a good idea and Charlie Knapp will be informing the plant managers at Avon and Long Beach. As you know, we could have a peace demonstration at Long Beach since American Electric is building a napalm plant right across the street.
