

Date 4 November 1974

To See Distribution Subject Personnel Monitoring for VCM Levels

From M. H. Stermon for week of October 28, 1974.

☐ Take Action ☐ For Your Approval ☒ For Your Info ☐ Discuss With Me
☐ For Your Comments ☐ As Requested ☐ File ☐ Note & Return

Attached are the results of the monitoring for VCM levels in the PVC plant for the week of 28 October 1974. All values are below 50 ppm for the second week in a row. If we can maintain the below 50 ppm readings in the polymer building next week, we will have all areas on a once-per-month sampling schedule.
