Dave Wood
Monsanto
800 N. Lindberg Blvd.
B-25D
St. Louis, MO 63166

Dear Dave:

As a result of recent conversations with the EPA and EPA contractors, it appears that regulations may be enacted requiring incineration of PCB contaminated waste oils (50 ppm and above) which could serve as a source of BTU's for our incinerator.

If this type of regulation is enacted, we anticipate the need for railroad tank cars to provide transportation of large quantities of waste oils. If Monsanto has railroad tank cars which have been in PCB service, we would be interested in discussing purchase or lease of up to 10 cars.

Thank you for your attention to this matter. Should you have any questions, please feel free to contact me.

Very truly yours,

Charles L. Robertson
Executive Vice President
