Allied Signal

Memorandum

Allied-Signal Inc.
Morris Township, New Jersey

November 24, 1986

To: H.C. Fogle
E.J. Freeman
D. Levine
K.W. Macon
E. Rogers
T.N. Stewart

From: J.B. Charm

In a recent publication, Charles L. Elkins, the Director of the Office of Toxic Substances, indicated the following:

- Asbestos is a known human carcinogen and is a proper subject for TSCA §6 - controls. EPA - OTS plans to promulgate a rule even though EPA will continue to evaluate new data from respondents;
- Elkins chairs a committee of 15 EPA office directors plus representatives of OSHA and the CPSC working on a multi-media approach to the control of solvents. At present, the committee is concentrating on risk assessment. The next step is to draft regulatory options from which to choose the appropriate risk management approach;
- Discussions of atmospheric ozone and controls on CFC's are moving on a parallel track with the control of solvents.
