Subject: Owens-Corning Cement Bags

The status of the supply of cement bags for this account is as follows:

TYPE	INVENTORY	USE/MONTH	PURCHASE DATE
OC-660*	1,600 bags	210	7.5 months *
OC-110	9,676 bags	2,220	4 months

*We have a supply of Fenco bags that covers the West Coast useage and is not reflected in these figures. They will be used during this year perhaps, so the time element may not be as long as indicated.

At the present time we are having to stencil a new water ratio on all the OC-110 bags that require the One-Cote type product. If they should ask for the Hylo type (old One-Cote) then the water ratio as printed is correct. If something can be worked out to eliminate the daily stencilling of these changes, we would appreciate it very much. Also keep in mind to make one supply of bags suitable, the stock has to be suitable for the Hylo product, or 2" longer than for the One-Cote product. Has OCF finalized or settled on one product as yet? If so we could pick out the right size and proper marking or water ratio and not have to stencil additionally.
