OCT 10 1975

Dear Mr. Papageorge:

Thank you for your willingness to provide us with a sample of Aroclor 1254. I enclose the Sample Request Form.

We would appreciate your advice regarding what to do with the unused portion after we have injected our mice. Should we return this to you, or what treatment would you recommend (harsh alkali?) that would effectively nullify its hazards?

Also, I would appreciate any information you can provide regarding its solubility. In a recent article by Mary F. Argus in CANCER RESEARCH she apparently dissolved it in corn oil and gave mice a single injection intraperitoneally of 500 mg/kg body wt.

Again, our sincerest appreciation for all your help!

Very truly yours,

Eric L. Simmons
