Aroclor Expansion
CEA 1800 and CEA 1430

Mr. H. F. Ray - KRUMMRICH
Mr. W. F. Taffee - ANNISTON

Starting with the month of November, please write me a monthly progress report concerning your respective aroclor expansions. Admittedly, most of the activity will be covered by CED's monthly reports and there is no justification for duplicating this information. However, an overall report of all the manufacturing activities pertinent to these two expansions from each location would be very helpful.

This should include summary reporting of PR&D and T&D activities when they are directly related to the support of CED's design work. As an example, Harry, a summary report of Krummrich process research work to define operating conditions for the continuous process would be a logical item for you to include from Krummrich.

Also, Manufacturing's activity should pick up momentum before too long.
