Manager, Environmental Health
Medical Department
Monsanto Company
800 N. Lindbergh Boulevard
Saint Louis, Missouri 63166

Dear Dr. Wheeler:

I sincerely appreciated your letter of May 7 and the extra bibliography on the PCB's. We are most interested in evaluating several relationships involved with these materials. At least four members of our Pesticide Research Center team are now involved in studies of PCB toxicology and the possible environmental implications and interactions.

We would be delighted to discuss this research with you or any of your staff and I will try to keep you informed on our program. We would be delighted to receive any additional information as it develops with your own research and if we can be of assistance at any time, please feel free to call on us.

Very truly yours,

Gordon Guyer
