1 WR File
1 RF File

You have received films for "Contact" from H&P with variations of plasticizer including S-711 as replacement for DOP and several S-261 formulations. You also have received three adhesives from H&P.

This WR is to cover the adhesive migration testing we have outlined, including vinyl to vinyl and vinyl to glass. Also, we have expanded the program by using RA-858 adhesive applicable to CCF and "DINOC" film from 3M.
