(

Sickness and disabilaty;

From the foregoing it will be seen that [redacted] was intermittently employed in a lead department (Department) 28-c from March 21 1929 to December 30, 1940. On this latte date, he was transferred to the box shop (Dept. 3-I C)

Where there is no lead hazard, and on October 5, 1942. he was transferred to to he receiving Dept. (Dept.IO), where there is likewise no lead hazard present.

On July 23, 1943, Dr. Boland wrote to Smyth Laboratories as follows:

" This employee was transferred December 27, 1940 from his previous occupation in a lead department to a non-lead department because of excessive lead absorption. Although he has been away from lead exposure for over 2 1/2 years he still has high stipple cell couths. I am sending him to you for quantitative blood lead and urinary lead determinations i order to ascertain whether or not these high stipple counts are due to stored lead. "

and on August 20, 1943, Smyth Laboratories reported as follows:

"On July 23 and 24 your employee, [redacted], was examined at my office. You received a verbal report on August9. Written report follows below:

" Present Physical examination essentially negative, except for parasthesia
