TO: DHJ ✓

SUBJECT: New Studies for Monsanto

We will be receiving authorization soon (4 samples of Aroclors) for chicken reproduction and tissue residue studies. The materials and feeding levels are as follows:

MCS 1016	1, 3, 10 ppm
Aroclor 1221	1, 3, 10 ppm
Aroclor 5432	30, 100, 300 ppm
MCS 1109 (or Aroclor 1221B)	1, 3, 10 ppm

A control group also should be added.

A sample of MCS 1109 is to be sent. The other samples are at Northbrook or WCRF. Do you still have the sample of 5432 (used for your dog study)?

Cost estimates of $8,000 each were quoted.

With their new demyelination studies (4 compounds) and these 4 reproduction studies, what is our poultry housing situation?
