RE: Blood Lead Comparison Program

LIA is now requesting from all member companies, blood lead test results for the fourth quarter (October 1 to December 31) of 1982. We encourage all member companies of LIA to participate in this program. Also, for those companies who are already involved in the program, this will be more valuable and effective if companies provide data on a quarterly basis.

No extra effort should be made to establish a new program. The program should be maintained. The request for data should be made available on request to OSHA, and the data should be made available at the time required to translate the data into a form that we can use. We prefer that companies enter the data on a form that we have provided. If this is not feasible, a form for companies to use is enclosed. Companies which have a problem with the form or with the data are requested to provide a copy of the form to the office. The data should be provided with the following information: name, address, telephone, and personnel by department.

Please keep employees in the program from quarter to quarter so that at a later date it will be possible to retrospectively follow individual trends. We are not interested in the individual name, and in fact would prefer to have a code number for each employee. If you could identify which industry sector your company and plant belong to (i.e. Primary, Secondary, Battery, Chemical, Glass or Other).

Please forward your data by April 14, 1983, via
