Preparation of Blue Fibre for [illegible] Sheet
T. P. 321-076 Opt. Status Report

On ton of CD-300 processed in Research was run in Paper Mill on 9/20/54. Preliminary results appear satisfactory. The Control Laboratory will issue a report on this run.

J. W. Reeder is requested to determine the cost of processing this fibre in I Bldg. according to Research specifications. Although this is not the grade originally recommended for use it appears that it will be more economical than that purchased by the Paper Mill from the Asbestos Corporation of America.
