JUL 12 1963

After reading your reply to H.J. Seppala on the experience Monsanto has had with Aroclor 4465, I have found a letter in my files that may be of help. A copy is attached which gives some references to various published articles in the 1937-1940 era that were studies of Aroclor 4465.

You may have some reservations about the validity of certain vapor concentrations, but at least the articles show that work was done.

I am copying Seppala in on this letter, so he can see the type of information that has been presented to prospective customers in former days.

If the journals referred to are not in our library, copies of these articles can be obtained.
