This will confirm our conversation regarding the sale of the subject spare equipment. The following approach is to be adhered to rigidly should such a sale be consummated before July 1, 1979. (After this date, absolutely no sale of equipment contaminated with PCB is to be made).

1. The Operating Company electing to make such a sale must vouch for the credibility of the buyer.

2. Sales contract language must be strongly worded regarding liability and protection of Monsanto's interests.

3. TSCA regulations applicable to marking and disposal from Monsanto's point of view must be followed.

4. Just prior to final consummation of the sale, Mr. Throdahl must be notified.

Mr. Throdahl, after consultation with Mr. Duesenberg, concurs in this approach.
