Dear Don:

Please send me a text-book description of the symptomatology and autopsy findings associated with Marek's disease; also one or more literature references.

I'm having some difficulty writing the Aroclor paper.

Are the "extensive growths" on kidneys, gonads, etc. lymphoma?

Otis C12246

Egg defects are not categorized in J 8746 as they are in J 7300. Do you have this information? This would make it easier to combine the two reports.

I found wgt. data for chicks in J 7300 but not viability data.

~~Neither is~~ Both are given for J 8746. [redacted]
