NATIONAL TEA COMPANY - CHICAGO, ILL.
THERMINOL FR-1 WASTE HEAT RECOVERY
SYSTEM

J. J. Roder - Chicago

Jim,

I have your note of November 3rd along with the correspondence that you had generated between Mr. Roy G. Hlavacek of Food Processing and Anthony J. Abbate of National Tea. You indicate the man from Food Processing gave up and you asked whether someone in our public relations department, such as Ed John, can pick this thing up to see if we can get some type of article published on the National Tea Therminol system. Jim, it all starts with you. If your relationship with Abbate is such that he is reticent to cooperate with us on an article, then I doubt whether Ed John can pull the thing out of the fire for us. Therefore, I am asking you to make an attempt to go back at National Tea either through Abbate or to someone else whom he would recommend who would approve such a write-up of the system. In the interim I would appreciate if you would advise Ed John and myself just what is involved in the Therminol system at National Tea. What are the waste heat exchange units? What process and what space heating is involved?

I am returning the copy of the correspondence and forwarding an additional copy to Ed John for his files. However, I feel that you are the one that will have to supply the impetus, the names at National Tea, and a cooperative attitude.

J. R. Fallon
