Dept. 246 - Containers
Drum Rinse

To: Mr. Don Harris - Dept. 246

The attached memo suggests we rinse Aroclor drums prior to loading. I understand from George Buchanan that Paul Benignus reports our European competitors have such a practice.

In my opinion our past problems have been related to drum construction, linings, etc. On the other hand we have no data as to possible benefits or quality problems from rinsing. Obviously the practice would be costly and require facilities and capital equipment.

Please set up a simple testing program. Rinse several drums and compare the electrical properties of material loaded in the rinsed drums versus non-rinsed drums.

Kindly advise if there are any questions.
