TO: F I L E

Peter Marsh telephoned me on Friday, February 4, to discuss several matters, one of which was the PCB program status in Europe.

Peter states that all letters went out on schedule and the plan is on target.

With regard to the Pydrauls for the German mines, the Oberbergamt is sending us a letter indicating the information which we requested. Apparently the legal people in ME feel this will be okay. Mobil, who supplies the German mines, has quite a stock and short term supply is not a problem.

ATTENTION BILL RICHARD:
Please advise me as to the timing for the new German mine fluids. When would it be possible for Lou Stark to present the replacement product in Europe? (Peter feels this could be postponed until March as he realizes the critical nature in our getting FM approvals and understands this must have first priority.)

Relative to technical meetings with co-producers, John Mason and Peter Marsh met last week with a board member of Bayer (Mr. Meyerheim). Meyerheim is concerned about the legal implications and fully sees the problem as we do. They have set up a meeting week of February 14 to reivew the legal consequences as viewed from a pollution viewpoint. This should be useful feedback for us. A later technical meeting is being established with Progil and Caffara.
