

1 material.

2 Experimental work was done with the
3 manufacturer of this material as early as 1930.

4 It was in 1938 that Owens-Illinois first
5 turned its attention to this new material in a pilot
6 operation started in 1942.

7 The next page which is page 2 at the top.

8 What has Owens-Illinois done to investigate
9 the health aspects of Kaylo?

10 It has always been a cardinal policy of the
11 company that the safety and health of its employees
12 and those who handle and use their products be
13 properly protected. Owens-Illinois made three types
14 of investigation.

15 A. All employees of the plants were given
16 preemployment physical examinations including chest
17 X-rays and annually thereafter.

18 Since the very beginning of the pilot plant
19 operation, no employee has shown any evidence of lung
20 damage, dermatitis, or other physical ailments
21 traceable to the handling of Kaylo.
