THERMINOL - SPECIFICATIONS

↳ file

K. L. McHugh
St. Louis - Research

I am enclosing all the vapor pressure thermal stability charts that we have for Therminols. We have run only a few samples and are now having trouble with the instrument. When these problems are resolved, we will run additional samples.

I believe that Dr. Koerner's group ran a number of samples on the new instrument before it was shipped to Anniston. Possibly you can obtain the results from Dr. Koerner.

When the tentative specifications for vapor pressure and thermal stability are set, I will issue specification sheets for approval.
