Subject: Emission Estimates for 2003 Production

Rob / Debbie,

Here's the file to use for emission estimates based on 2003 production forecasts.

Note that the FEP data did not identify which line was planned for use so I split it 35/35/30 on lines 1, 2, & 3. Recent history has shown smaller use of line 3 but I expect that will grow to a higher percentage. Line 3 has the highest stack.

Note also that this sheet does not show the use of any operation without the use of the deep-bed scrubber. We plan to ask for 3 months of operation in this mode for 2003 and 6 weeks thereafter. We might have no use of this scenario if the deep-bed scrubber is highly reliable.

Thanks,
Chris Shoop
